

## Lesson 6: Cars and Transportation

### A Floating Car

Photo: <http://old.computerra.ru>

LONDON, ENGLAND. Amazing new inventions are appearing almost every day. We are getting smaller and smaller cell phones and tiny MP3 players. There are even robot vacuum cleaners that clean our floors without human help.

Now there's the Aquada, a British-made car that is also a boat. You just touch a button and like magic it turns into a boat. The Aquada has no doors – you have to jump into it. It goes fast on the road and in the water. You can drive it either in a lake or in the ocean.

The makers say that the Aquada is a good toy, but it is also perfect for getting to work every day in a city. You can ride on the river in case the roads are busy.

You can see the whole lesson from your teacher, please ask them to send it to you before the class.
