## Reading

Do intelligence and creativity always go hand in hand? Are all intelligent? To try to answer these questions, we first need to define the words “creativity” and “intelligence.” Unfortunately, this is very difficult to define. There are different kinds of creativity, just as there are different kinds of intelligence. Some people have the kind of creativity it takes to write a novel or paint a picture; others have the kind it takes to come up with a scientific theory. In the same way, some people who are intelligent when it comes to solving math problems are terrible at learning languages, and vice versa.

You can see the whole lesson from your teacher, please ask them to send it to you before the class.
