

Lobsters

Vocabulary

Crustaceans - The Latin root, crustaceus, "having a crust or shell", includes such familiar animals as crabs, lobsters and shrimp

Pincers - a tool made of two pieces of metal bearing blunt concave jaws that are arranged like the blades of scissors, used for gripping and pulling things.

A front claw of a lobster, crab, or similar crustacean that enables it to carry loads, to defend against other creatures, or to attack prey.

Creature - any large or small living thing that can move independently.

Lobsters are a kind of ocean creature called crustaceans. Crabs and shrimp are crustaceans too. Lobsters, and most other crustaceans, are found throughout the world's oceans, often under rocks or in cracks on the sea floor.

Lobsters have five pairs of legs, three of which are claws. The front claws, sometimes called pincers, are larger than the others. Scientists believe lobsters can live up to 70 years!
