Reading

Recently popular luxury electric carmaker Tesla Motors revealed to the world its much anticipated Tesla Model 3. The new prototype electric car was unveiled by Tesla CEO Elon Musk at Tesla's Los Angeles design studio in California, USA.

The new Model 3 will have a starting price of US\$35,000. However, it won't be available till the end of 2017. It can be ordered in many countries around the world including the UK, India, China and New Zealand. It will be Tesla's first mass produced electric car.

In the first two days alone pre-orders surpassed 276,000. Every car was secured by a deposit of US\$1,000 or similar in other currencies. Unlike deposits for iPhones, the Tesla deposits are fully refundable.

Following this huge wave of interest Musk tweeted that the company was "definitely going to need to rethink production planning". He added, "The future of electric cars is looking bright!" Musk would like to produce about 500,000 vehicles a year of the new Model 3.
