The Wii

The *Wii* is a video game **created** by Nintendo that uses a **wireless controller** to show the **movements** of your body, hands and legs on a **television** screen. It was first presented to the **public** in November 2006

Wii controllers have many forms and **shapes** . For example, they can **simulate** the **movement** of a tennis racket, a **golf** club or other things. A **fitness pad** allows you to do **exercises** that a fitness trainer on the television screen shows you.

The *Wii* turns a video game into a **physical activity** that is fun too. It is also used by doctors and **therapists** who show **patients** how to **balance** themselves or build up muscles after an operation or illness.
